AFRICA LOGISTICS

Platform Overview & Feature Guide

Ethiopia • Djibouti • Kenya • Sudan

Prepared for

Client Review

March 2026

Executive Summary

Africa Logistics is a professional logistics and fleet management platform built for the Ethiopian market and key cross-border trade routes. It connects businesses and individuals who need to move goods with verified truck drivers — all managed through a single, easy-to-use platform.

> What the platform does in one sentence:
> A shipper creates an order, a verified driver is assigned, goods are picked up and delivered — and every step is tracked, confirmed, and recorded in real time.

Who Uses It

User Type	Who They Are	What They Do on the Platform
Shipper	Businesses, NGOs, exporters, individuals	Create orders, track shipments, download invoices
Driver	Truck owners or employed drivers	Accept jobs, confirm pickups and deliveries, manage earnings
Dispatcher	Your operations team	Assign orders, monitor the fleet, handle issues
Admin	Platform management	Full control over users, pricing, vehicles, and reporting

Platforms Available

Platform	Access Method	Best For
Web Application	Any browser on desktop or mobile	Full experience for shippers and admin
Telegram Mini App	Inside Telegram messenger	Quick order booking and tracking from Telegram
Driver App	Web browser on any phone	Order management for drivers on the road

Shipper Features

Shippers are the businesses and individuals sending goods. Here is everything available to them on the platform.

Account & Access

🔐 Telegram Login
Sign in instantly using your existing Telegram account — no new password needed.

👤 Profile Management
Update your name, contact details, and notification preferences at any time.

🌓 Dark & Light Mode
Switch between dark and light display themes to suit your preference or environment.

🔑 Password & Security
Change your password and manage account security settings with ease.

Placing & Managing Orders

📦 Create an Order
Enter pickup location, delivery destination, cargo type, and weight. The system calculates an instant price estimate.

🗺️ Map-Based Location
Select pickup and drop-off points directly on an interactive map — no need to type addresses manually.

📋 Order History
View all past and current orders in one place, with full details and status history.

🔍 Order Tracking
Follow your shipment's exact status at every stage of the journey in real time.

💬 Chat with Driver
Send messages directly to your assigned driver through the platform — no need to share personal phone numbers.

🧾 Invoice Download
Download a professional PDF invoice for any completed order, ready for your records or accounting.

💰 Wallet
View your wallet balance, transaction history, and payment records all in one place.

🔔 Notifications
Receive updates at every key stage — order accepted, driver en route, pickup confirmed, delivery complete.

Order Status — What Shippers See

Shippers can follow the live status of their shipment throughout its journey:

Order Placed	Driver Assigned	Picked Up	In Transit	Delivered	Completed

For cross-border shipments, additional stages are shown:

At Border	In Customs	Customs Cleared

Driver Features

Drivers are the verified truck operators who fulfill deliveries. The platform is designed to be simple and fast on a mobile browser.

Account & Onboarding

📱 Phone Login
Drivers log in with their phone number and password — simple and secure.

📄 Document Upload
Upload your National ID, Driver's License, and vehicle ownership document (Libre) directly through the app.

✅ Verification Badge
Once documents are reviewed and approved by the team, your profile displays a verified badge visible to shippers.

🚛 Vehicle Profile
Your assigned vehicle details — type, capacity, and plate number — are linked to your account.

Managing Orders

📥 Incoming Job Requests
Receive new order requests with full pickup and delivery details before accepting.

✔️ Accept or Decline
Review the job details and choose to accept or pass. Accepted jobs move to your active order list.

📍 Status Updates
Update your order status at each stage — en route, picked up, in transit, delivered — with a single tap.

🔐 OTP Confirmation
Confirm pickup and delivery using a one-time code shared with the shipper. This protects all parties.

📜 Order History
View all completed and past jobs with full details and earnings per trip.

💬 Chat with Shipper
Communicate directly with the shipper through in-app messaging during an active order.

🔔 Push Notifications
Receive instant alerts for new job assignments, messages, and important updates even when the app is in the background.

🌗 Dark & Light Mode
Comfortable viewing day or night, especially useful when driving in varying light conditions.

Earnings & Wallet

💵 Trip Earnings

Every completed delivery is automatically recorded in your wallet ledger with the full amount.

📊 Commission Transparency

Your commission deduction is shown clearly for every trip — no hidden charges.

🏦 Wallet Balance

Check your current balance and full transaction history at any time.

🎁 Bonuses

Qualify for performance bonuses based on completed trips, on-time delivery rate, and shipper ratings.

Admin & Operations Features

The admin dashboard gives your operations team full control over the platform — from monitoring the live fleet to managing pricing and resolving disputes.

Order Management

📋 All Orders View
See every order on the platform in one table — filter by status, city, date, or driver.

🧭 Manual Assignment
Assign any order to a specific driver, or use the system's auto-suggestion based on proximity and availability.

✏️ Order Override
Update order status, adjust pricing, add notes, or reassign a driver at any point in the order lifecycle.

🆕 Create an Order
Operations team can place orders on behalf of shippers directly from the admin panel.

Fleet & Driver Management

🗺️ Live Map View
See all active drivers plotted on a map in real time — location refreshes automatically.

🚛 Vehicle Management
Add, edit, and manage all vehicles in the fleet including type, capacity, and ownership details.

👷 Driver Management
View driver profiles, check verification status, suspend or reactivate accounts.

📄 Document Verification
Review and approve or reject uploaded driver documents — ID, license, and Libre — from the dashboard.

Pricing & Finance

💲 Pricing Rules
Set base fares, per-km rates, and city surcharges for any route or vehicle type. Update them instantly from the dashboard.

➕ Extra Charges
Add one-off charges per order for waiting time, loading, or special cargo handling.

📊 Revenue Overview

🧾 Invoice Management

Track total revenue, commission collected, and driver payouts across any date range.

Download invoices for any order. All invoices are automatically generated on order completion.

Platform Settings

🌍 Country & City Management

Add or update supported countries and cities as operations expand to new corridors.

💳 Payment Gateway Settings

Configure and manage payment methods available on the platform.

📦 Cargo Types

Define and manage the list of cargo categories available when creating an order.

🔔 Push Notification Control

Enable or disable specific notification types across the platform from one settings panel.

User Flows

This section shows exactly what happens at each stage of the main platform journeys — from a shipper placing their first order to a cross-border delivery being completed.

Flow 1 — Shipper Places an Order

How a business or individual creates a new shipment from start to driver assignment.

Step	Who	What Happens
1	**Shipper**	Opens the web app or Telegram Mini App and logs in via Telegram
2	**Shipper**	Taps 'New Order' and selects pickup location on the map
3	**Shipper**	Selects delivery destination on the map
4	**Shipper**	Enters cargo type, estimated weight, and any special instructions
5	**System**	Calculates distance and shows an instant price estimate
6	**Shipper**	Reviews the estimate and confirms the order
7	**System**	Creates the order, generates a unique reference code (e.g. AL-2024-00042), and notifies the operations team
8	**Dispatcher**	Reviews the order and assigns the most suitable available driver
9	**Driver**	Receives a notification with full order details and accepts the job
10	**Shipper**	Receives a notification: 'Your driver has been assigned — [Driver Name] is on the way'

> The shipper can track the driver's movement and status in real time from the order detail page after step 10.

Flow 2 — Pickup & Delivery

What happens when the driver arrives to collect and then deliver the shipment.

Step	Who	What Happens
1	**Driver**	Drives to the pickup location and arrives at the shipper's address
2	**Driver**	Taps 'I have arrived at pickup' — shipper is notified

3	**Shipper**	Meets the driver and shares the 6-digit pickup code shown on their order page
4	**Driver**	Enters the pickup code into the app to confirm collection
5	**System**	Records confirmed pickup with timestamp. Order status updates to 'In Transit'
6	**Driver**	Travels to delivery destination, updating status along the way
7	**Shipper**	Tracks live progress and receives status updates throughout transit
8	**Driver**	Arrives at delivery address and taps 'Arrived at delivery'
9	**Recipient**	Receives goods and provides the 6-digit delivery code to the driver
10	**Driver**	Enters the delivery code — order is marked as 'Delivered'
11	**System**	Records delivery with timestamp, updates wallet, notifies shipper
12	**Shipper**	Receives confirmation notification. Invoice is available to download.

Why OTP codes?
The 6-digit codes at pickup and delivery confirm that goods physically changed hands — protecting both the shipper and the driver in case of any dispute.

Flow 3 — New Driver Joins the Platform

How a truck driver gets registered, verified, and ready to accept jobs.

Step	Who	What Happens
1	**Driver**	Contacts the Africa Logistics team to request onboarding
2	**Operations**	Creates a driver account and sends login credentials via SMS
3	**Driver**	Logs into the driver app with phone number and password
4	**Driver**	Completes their profile: name, photo, phone number
5	**Driver**	Uploads required documents: National ID, Driver's License, Libre
6	**Admin**	Reviews uploaded documents in the admin dashboard
7	**Admin**	Approves each document — driver receives a 'Verified' badge on their profile
8	**Admin**	Links a vehicle to the driver's profile
9	**System**	Driver status is set to 'Available' — they can now receive job requests

Flow 4 — Cross-Border Shipment (Phase 2)

How a shipment moving between Ethiopia and a neighbouring country (e.g. Djibouti) is tracked through the border.

Step	Who	What Happens	Note
1	**Shipper**	Creates an order and selects a cross-border destination (e.g. Djibouti City)	
2	**System**	Identifies this as a cross-border order and shows applicable cross-border pricing	
3	**Admin**	Assigns a driver approved for cross-border routes	
4	**Driver**	Picks up cargo using OTP confirmation (same as domestic flow)	
5	**Driver**	Arrives at the border checkpoint and taps 'At Border'	
6	**Admin**	Updates shipment status and records border crossing reference	
7	**Admin**	Monitors customs clearance process. Updates status to 'In Customs'	
8	**Admin**	Once cleared, updates status to 'Customs Cleared' — driver proceeds	
9	**Driver**	Delivers to final destination and confirms with delivery OTP	
10	**Shipper**	Receives full delivery confirmation with complete status history	

Cross-border logistics involves government checkpoints, customs procedures, and document requirements. The platform tracks every stage so both the shipper and your team always know where the shipment is.

Telegram Mini App

Africa Logistics is available directly inside Telegram — no separate app download required. Users who prefer Telegram can book and track shipments without ever leaving the messenger they already use every day.

> Telegram has over 10 million active users in Ethiopia. The Mini App puts Africa Logistics in front of your customers where they already spend their time.

What the Telegram Mini App Includes

Feature	Available in Telegram?	Notes
Create a new order	✅ Yes	Simplified 3-step form optimised for mobile
Track an existing order	✅ Yes	Live status with full timeline
Receive order notifications	✅ Yes	Delivered directly as Telegram messages
View order history	✅ Yes	Recent orders list
Admin dashboard	❌ No	Full admin tools available on web only
Driver management	❌ No	Web app only
Invoice download	❌ No	Available on the full web app

How It Works

Step	Who	What Happens
1	User	Opens Telegram and searches for the Africa Logistics bot
2	User	Taps 'Open App' — the Mini App loads inside Telegram
3	User	Logs in automatically using their Telegram account (no password)
4	User	Creates an order or checks a shipment status
5	System	Sends updates as Telegram messages directly in the chat

The Mini App automatically matches the user's Telegram theme — dark mode or light mode — for a seamless experience.

Rollout Plan

Africa Logistics is built in phases so that each stage is fully operational before the next is added. This ensures reliability and allows the team to learn from real operations before expanding.

Phase 1 — Ethiopia Operations (Months 1–4)

This is the launch phase. Everything here will be live and operational before Phase 2 begins.

What's Included	Detail
Geography	Multi-city Ethiopia: Addis Ababa, Adama, Dire Dawa, Hawassa, Bahir Dar
Shipment Types	Intercity truck delivery
Fleet	Truck-based — company-owned and driver-owned vehicles
Users	Shippers (businesses + individuals) + Verified drivers + Admin team
Payment	Cash-based with full digital records and wallet ledger
Dispatch	Manual assignment by operations team, with auto-suggestion
Platforms	Full web app + Telegram Mini App + Driver app
Notifications	SMS + push notifications + Telegram alerts
Tracking	Live driver location + order status updates
Languages	English

Phase 2 — Cross-Border Expansion (Months 4–8)

Cross-border corridors are added once Phase 1 operations are stable and the team has built operational experience.

What's Added	Detail
New Corridors	Ethiopia ↔ Djibouti (first), then Kenya and Sudan
Border Tracking	New status stages: At Border, In Customs, Customs Cleared
Document Handling	Upload and track border crossing and customs documents per shipment
Pricing	Cross-border pricing multipliers applied automatically
SMS Coverage	International SMS routing added for non-Ethiopian numbers

Phase 3 — Full Compliance & Advanced Features (Month 8+)

What's Added	Detail
Customs Workflows	Structured customs declaration and duties tracking
Broker Integration	Connect with licensed customs brokers directly in the platform
Mobile Money Payments	Telebirr, CBE Birr integration for digital payments
Language Support	Amharic and additional local languages
Advanced Analytics	Detailed performance dashboards and business intelligence

How Success Is Measured

These are the key metrics that Africa Logistics tracks to measure platform health and business performance. All metrics are visible to the admin team from the dashboard.

Metric	What It Measures	Why It Matters
Order Completion Rate	% of orders that reach 'Delivered' status	Shows overall reliability of the platform
On-Time Delivery Rate	% of deliveries completed within estimated time	Directly reflects driver and operations quality
Driver Utilisation	% of time active drivers are on a job	Shows efficiency of fleet allocation
Revenue per Trip	Average earnings per completed order	Core business health indicator
Failed Delivery Rate	% of orders that reach 'Failed' status	Identifies operational problems early
Average Assignment Time	Time from order creation to driver assignment	Measures dispatch team responsiveness
Customer Repeat Rate	% of shippers who place more than one order	Measures customer satisfaction indirectly

Security & Trust

Every part of Africa Logistics is built with security and accountability at its core — protecting shippers, drivers, and your business.

Driver Verification

No driver can accept a job until the following documents have been reviewed and approved by your team:

Document	Purpose
National ID	Confirms identity of the driver
Driver's Licence	Confirms legal right to operate a commercial vehicle
Libre (Vehicle Ownership)	Confirms the vehicle is legally registered and owned/operated by the driver

OTP Protection

Every pickup and every delivery requires a one-time code confirmation. This means:

- A driver cannot mark a pickup as complete without the shipper's code
- A delivery cannot be marked as complete without the recipient's code
- Cash disputes have a clear, timestamped audit trail
- Fake delivery confirmations are not possible

Full Audit Trail

Every action on the platform is logged — who did it, when, and what changed. This includes:

- Every order status change
- Every wallet transaction
- Every document approval or rejection
- Every manual override by the operations team

> The audit log cannot be edited or deleted. It is a permanent, tamper-proof record of all platform activity.

Data Privacy

- Shippers and drivers never see each other's personal phone numbers — all communication goes through the platform chat
- Driver documents are stored securely and are only accessible to authorised admin users
- Wallet data is private and only visible to the account holder and admin

Complete Feature Summary

A full reference of all features across each user type and platform.

Shipper Features

Feature	Web App	Telegram Mini App
Telegram login	✅	✅
Create new order with map selection	✅	✅
Instant price estimate	✅	✅
Order tracking (live)	✅	✅
